Thai and I (Gahyun) registered the accelerometer sensor in the AccelerometerService class of the application. We tested the plot on the phone UI and on the browser. Colin wrote the python script for averaging the accelerometer data and tested it.

One concern we have is that our Microsoft band is not connecting to My-Activities app. We discussed with the TAs but have not been able to figure it out. I then received a newer band (Microsoft band 2) and did a factory reset, uninstalled and reinstalled the Health app, but it is still not connecting. It is paired via bluetooth and recognized in the Health app, but is not connecting to My-Activities.
